Because today's children are tomorrow's leaders, Waste Management is working to help them develop a genuine respect for the environment we all share. And showing them how we *Think Green*.

We're educating students of all ages how environmental awareness is at the heart of what we do every day. How our state-of-the-art engineering techniques help us safely maintain and restore landfills into usable green spaces. How we use advanced optical sorting technologies to efficiently recycle plastics and glass. And how we transform common waste products into uncommonly clean, green energy that powers homes and businesses.

So, if you thought we were just the people in the big green trucks – maybe it's time to think again. And *Think Green*.

Think Green. Think Waste Management.***
